Description:

The Fort Rucker Fire Department just received one of KFT's portable HazMat Tanker Trainers MS-10. The department is the largest Fire Department within the department of the Army, which also serves as a Regional Training site for the Alabama Fire College.

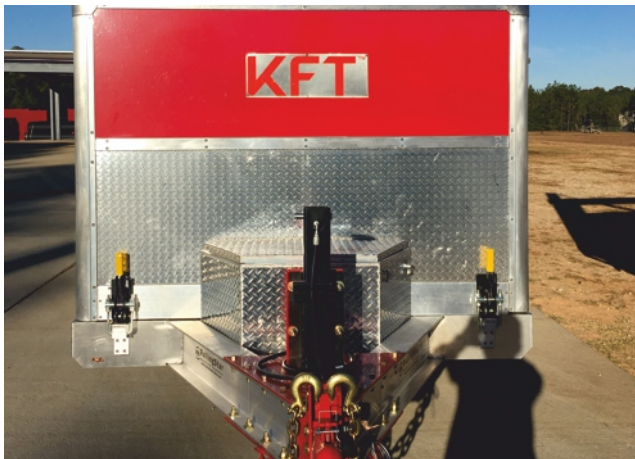

Deputy Chief Keen stated that he likes the interchangeable features of KFT's portable line of products as the department is scheduled to receive a portable helicopter mock up after the first of the year and they have plans for future purchases of additional mock ups. Having the ability to share pilot boxes, trailers and accessories is a significant benefit for their fire department.

The MS-10 trainer was purchased through a Defense Logistics Agency Tailored Logistics Support Package contract with LN Curtis. KFT and LNC Curtis supported the fire department for more than a year to get the funding approved for the purchase.

The currently in use MS-10 HazMat Trainer is useable both on ist trailer truck or in a stationary mode. It features multiple tank leaks, can simulate a tank rollover accident and has both a chlorine and a gasoline dome leak simulator on board.

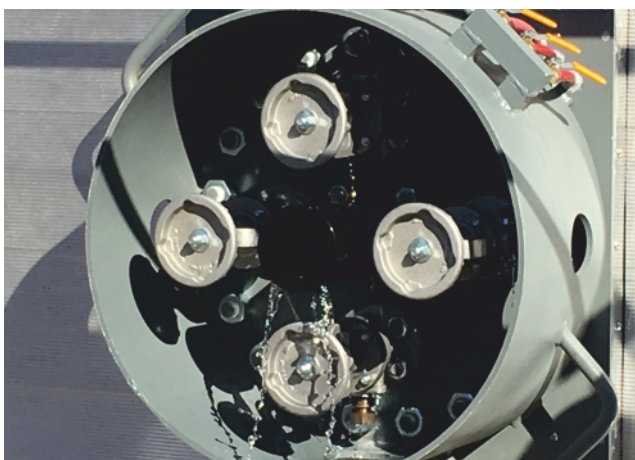

Both Tank Leaks Activated
